## **GX series pool and spa cartridge filters**

**The unique, Australian made and designed Hurlcon GX Cartridge Filters are changing the face of filtration in Australia.**

**It has long been accepted that a cartridge filter can provide finer filtering than a sand filter.**

**It has also been acknowledged that they are more expensive and require more maintenance.**

**The Hurlcon GX changes all that. Its filtration is still finer, even more so, but that extra performance no longer carries a higher price tag. Maintenance is also no longer an issue.**

**And they don't require a back-washing line so they are often ideal for places or situations where waste water conservation is crucial.**

# Hurlcon GX series pool and spa cartridge filters

## Australian Made and Quality Components.

Hurlcon's ingenious GX design and local manufacturing expertise have substantially reduce the price of high quality, high

performance cartridge filters in Australia.

Combined with less resistance than sand, a lower pressure drop, faster flow rate, faster cleaning process and therefore less power consumption, the GX means high quality cartridge filters are now cheaper to buy and run than ever before.

## Specifications.

Model	Flow Rate lpm	Filter Area Sq ft	Filter Area m2	Pump Size Watts (output)	Weight kg
GX 400	500	400	38	750-1500	37.0
GX 600	500	600	57	750-1500	38.0

Available from:

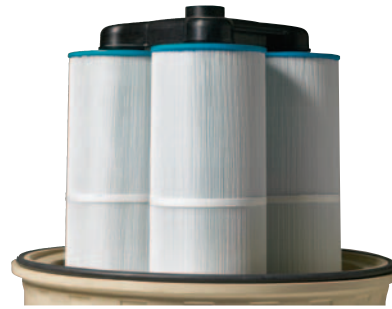

The Hurlcon GX Cartridge Filters use four state-of-the-art Du Pont Reemay filter elements.

One of the world's best filters, the Du Pont Reemay will provide years of super fine filtration. They filter the finest particles with-out embedding them in the elements.

So they not only clean the water more completely, they also clean themselves more thoroughly and more easily than other cartridges.

## Once-a-Year Cleaning.

With four elements, the GX has enormous capacity. On most pools they should not need cleaning more than once per year. When they do need cleaning, simply remove the top half of the super tough High Density Poly Ethylene casing and follow the instructions to clean and replace the cartridges.

## Water Conservation.

This once-a-year clean replaces the regular backwashing required by sand filters.

By just eliminating this back-washing process, the GX can save between 12,000 and 20,000 litres of precious water every year.

## Convenience.

Manual air bleeding is no longer a part of a routine maintenance

program. The GX has a built-in automatic air bleed system. The 50mm water connections glue in for fast installation and the capacity to handle high flow rates. With no sewer connections and less plumbing, GX is easy and cheap to install.

## Reliability.

Every GX will cope easily with high spa temperatures and while the maximum operating pressure is just 250 kpa, every GX is actually tested to 700 kpa.

When sealed the automatic internal pressure release valve prevents damage to the pump and filter should the filter element ever become blocked.

Even the oil-filled gauge has been selected to provide greater accuracy and reliability.

## Genus Technology.

The GX Series is part of a family of high quality, highly intelligent, interconnected products that work together to take total care of your pool and spa.

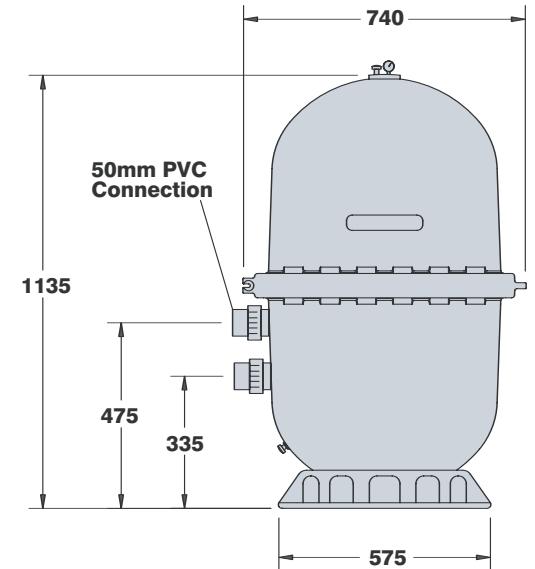

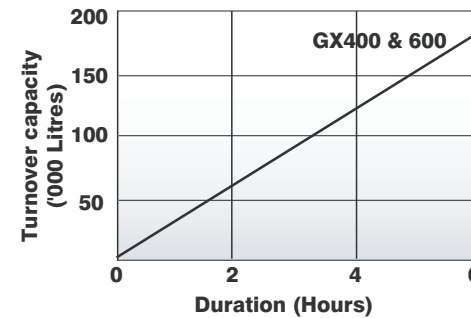

The Genus IV controller links all the separate components together through a single control that allows any member of the family to operate the system. (Full Genus IV system is sold separately).

## Range.

The Hurlcon GX Series Pool Cartridge Filters are available with 38m2 or 57m2 filter area and are ideal for any pool or commercial spa.

## Warranty.

Each filter is covered by a limited 5 year warranty on the tank and 12 months on other components. For full details refer to the GX Series Instruction Sheet.
